

FOR IMMEDIATE RELEASE - March 21, 2011

Start thinking in Next View Cloud

WMS & LMS Solutions powered by  Windows Azure

Orange, CA – Next View Software, an innovative provider of Supply Chain Execution software solutions, announced today that its cloud powered Labor and Warehouse Management System is now available on the Microsoft Windows Azure platform.

Bob Rosales, Business Development leader for Next View Software, says, “our customers want a cloud powered solution that offers the same performance, reliability and security as their own internally hosted solutions. Using the new Windows Azure platform, we exceed the requirements of a traditional installation in a customer’s internal data center. Our cloud powered solutions are now hosted in Microsoft’s own data centers where they are monitored 24/7 to provide the performance and reliability our customers demand.”

Alexander Schmitz, Software Development leader of Next View says, “we chose Microsoft Windows Azure because it offers all the components to deploy a world class cloud powered solution. Windows Azure provides built-in load balancing for our web based front-end and the ability to deploy additional resources at peak times so that our customer have the response times they expect. Our solutions require a database with high throughput and availability as they can store a significant amount of data, especially our Labor

Management System. SQL Azure meets these requirements. It is a highly available database that maintains multiple redundant images managed within Azure. Our cloud based solution is ideal for any range of installations since it can be scaled to meet the demands of a small single site or a large multi-site LMS and WMS deployment. Finally, we needed a platform that offered the security features that corporate IT departments require such as single sign-on so that we can tightly link our solution to our customer’s internal network.”

Rosales adds, “Next View Software is a Microsoft Gold ISV Partner. In addition, we joined the Microsoft Platform Ready initiative and passed the certification tests to show that our solutions are ready to run in Windows Azure. Next View Software strongly believes that the Cloud is the future in Supply Chain Execution computing and we proved again we are a leader in this area by being recognized by Microsoft as a Front Runner on Windows Azure.”

About Next View Software, Inc.

Next View Software is an innovative leader in the cloud powered supply chain execution software market.
